

## ABSTRACT OF THE DISCLOSURE

Analyzing data on a network. At a network monitoring computer, network traffic is captured during a period of time. The network traffic is compiled into sections. Information about the sections including, start time, end time, number of frames in the section and bytes/sec are compiled. At a user computer remote from the network monitoring computer, a histogram is stored. The histogram includes for substantially all of the captured network traffic, start time, end time, total frames and total bytes. The histogram also includes for each of the sections, the information about the sections.
